

Trivedi Enterprises: Masters in Manufacturing Stainless Steel Water Tanks

Trivedi Enterprises has been manufacturing modern design, light-weight, durable and eco-friendly stainless steel storage tanks since 2001 ensuring healthy living for its customers across the country, said Director, Mr. Vinit Mehta.

Stating further he said that this type of tank is being manufactured for the first time in India out of imported mirror finish stainless steel plates (SS304 2BA) and offers the best solution for the storage of potable water with "Zero Retention" for daily use. The size of the storage tanks varies from a capacity of 100 liters to 4000 liters, but at the same time it can also undertake manufacturing of custom

tanks as per the customers' requirements.

According to Mr. Mehta, currently, the plastic, galvanized, mild steel and concrete tanks are being used to store water for drinking purpose but the stored water in these tanks is not safe and hygienic for consumption mainly because the materials being used to manufacture these tanks are porous, which in turn helps the growth of bacteria, fungus and algae leading to water contamination.

The water temperature increases significantly in plastic

tanks in summer season causing the increase in growth of bacteria. The mirror finish material that we use for the tank manufacturing reflects the heat and sun's rays, therefore resisting an alarming increase in temperature. In addition, it is a challenge to clean these tanks regularly and thoroughly. Hence the prevailing method of storing drinking water for domestic consumption is very harmful. Moreover, Stainless Steel has longer life span whereas plastic tanks required replacements at least 5 to 10 times in one's life, he claimed.

He revealed that Trivedi Enterprises is an ISO 9001 certified company and its stainless steel tanks have been authorized by the Bombay Municipal Corporation (BMC). Specifically for the construction industry, our smaller range of tanks with a capacity of 100 liters to 300 liters can provide eco-friendly and hygienic storage of drinking water in apartments, bungalows, flats and kitchens. On the other hand, our larger tanks of 500 liters to 4000 liters more suitable specifically for apartments, flats, society housing projects and complexes.
